

The force of a secure coupling. A stainless steel bracket for fastening boxes to poles

New Elfin's innovative bracket in stainless steel is designed to securely fasten elements, such as boxes, cabinets, signs and panels in general to poles. It has a particular shape that allows it to be fastened onto poles with a diameter from 120 ÷ 160 mm, guaranteeing a solid grip to the curved surface.

The bracket can be fastened with a metal strap or with bolts

The top and bottom outside covers ensure a tight hold to the pole and they prevent access and tampering with the contents
